**WATER TO WELLS AND WORLDFIFE WATER TEAM UP
TO SHIP MUCH NEEDED WATER TO HAITI**

Cincinnatians Can Help by Downloading the Original Song "Haiti Can't Wait"

Cincinnati, Ohio – February 26, 2010 – A local rock band, *Water to Wells*, and local bottled water company, *WorldLife Water*, have recently joined forces to deliver desperately needed water to the earthquake-ravaged nation of Haiti.

When Kris Kalnow, founder of *WorldLife Water* learned about the magnitude of January's Haitian earthquake, she knew that she had to help. She had 10,000 bottles of water sitting in her warehouse, and shipped them off to Haiti, with the help of Vogt Warehouse and Matthew 25: Ministries. But Kalnow felt she needed to do more.

Dave Blumberg, lead singer of *Water to Wells* who was already writing a song about the tragedy saw the stories on Kalnow's efforts in the local media, and felt compelled to contact Kalnow to see how they could collaborate on the Haitian relief efforts. Helping third-world countries was nothing new to his band, as the band had previously done so in their work as a ministry group of the Loveland United Methodist Church.

Says Blumberg, "We were inspired by what Kalnow was doing, and it hit us that we are a perfect fit to team-up and make a bigger impact on those living without food or water in Haiti. The end result was an original song entitled "Haiti Can't Wait." Blumberg added, "As I watched continued footage of the quake's tragic toll, the song basically wrote itself. "Haiti can't wait," because "the pain and suffering is much too great."

Beginning February 26, the song will be made available on the band's website. Says Blumberg "We ask that the media offer the website link to their viewers or listeners. 100% of the net monies received from these downloads will go directly to *WorldLife Water*, to ensure that the flow of water to the island nation does not dry up.

Says Kalnow, "We will be providing the water at our cost, assuring that the monies received allow us to ship the largest quantities possible." She added, "It is important to note that *WorldLife Water* comes in a truly biodegradable bottle, which will help to reduce pollution in both land and ocean environments on the island of Haiti. They are the only PET bottles that will completely degrade in an aerobic (compost) in just 3 months or anaerobic (landfill) in 6 months. Additionally, our bottles do not contain Bishphenol A (BPA), which has shown to be harmful to children in recent studies. Our company is committed to protecting our people, habitats and wildlife, and we will do so in Haiti."

Kalnow added, "Our initial goal from this relief effort is to ship another 10,000 bottles of water to Haiti. We invite Greater Cincinnati to help us reach that number, and hopefully surpass it!"
